Marcelle Yanari Yamaguti

Frontend Developer | ReactJS, NextJS, Javascript, React Native,
Google Cloud Platform | #OpenToWork
São Paulo, São Paulo, Brazil

Summary

Senior Frontend Developer with 6+ years of experience building scalable web and mobile applications. Expert in ReactJS, Next.js, React Native, and Flutter, with proven success leading engineering teams and delivering solutions for financial institutions and enterprise clients across Latin America. Skilled in cloud platforms (GCP, Firebase), agile development, and modern front-end architecture

Experience

Análise Editorial

Full Stack Engineer

January 2026 - Present (10 months)

São Paulo, Brazil

- Develop and maintain full-stack applications using Laravel, PHP, PostgreSQL, and SQL, with a strong focus on backend development and data-intensive features.
- Design and optimize complex SQL queries to support business logic, reporting systems, data retrieval, filtering, and internal workflows.
- Build and maintain internal reporting systems, including dynamic filters and data-driven interfaces tailored to business requirements.
- Develop and enhance internal sales systems and intranet applications, implementing new features, workflows, integrations, and usability improvements.
- Work extensively with structured business data, translating complex requirements into reliable backend logic and efficient data processing.
- Apply AI-assisted development workflows to improve productivity and problem-solving while maintaining a strong understanding of the underlying architecture, code, and development process.

Lopti

Senior Frontend Developer

May 2025 - September 2025 (5 months)

San Francisco, CA

- Led frontend development within the team, taking technical ownership of frontend architecture, implementation, and delivery of key product features.
- Developed user-facing applications with React and TypeScript, with a strong focus on UI/UX, responsive interfaces, and usability.
- Worked closely with the AI team to translate AI-driven features and capabilities into intuitive, user-friendly product experiences.
- Took ownership of frontend features from requirements through implementation, collaborating with product, design, backend, and AI teams to deliver cohesive user experiences.
- Contributed to frontend architecture and development standards, helping the team build reusable components and maintainable UI patterns.
- Acted as a technical reference for the frontend team, supporting implementation decisions, code reviews, problem-solving, and feature delivery.

Accenture

Application Development Senior Consultant

February 2022 - October 2024 (2 years 9 months)

- Spearheaded the integration of Google Analytics and Salesforce with React Native and Flutter apps for RaiaDrogasil Group (RD), enabling personalized communication through mobile apps. 75% of digital interactions now occur via the apps, which account for 17% of the company's sales.
- Upgraded GA infrastructure to modern standards, unlocking precise tracking of user behavior and improving Martech alignment.
- Built a complete automotive financing platform for a leading Mexican bank using React, Redux, and Figma, enhancing the customer journey with quick approvals and flexible loan terms (12 to 60 months).
- Migrated a legacy system to Node.js with cron jobs and GCP services (Pub/Sub, Cloud Scheduler, Cloud Functions), improving automation, scalability, and system reliability.
- Created a GCP-based data monetization platform for TIM Brasil using Cloud Run, Pub/Sub, Cloud Functions, BigQuery, Python, Flask and API Gateway, enabling behavioral data stitching for 62M+ customers and generating new business opportunities.
- Worked in cross-functional squads using Agile/Scrum with Jira, ensuring fast iterations, clear communication, and timely delivery.

- Applied Git and Gitflow for version control and maintained high code quality through reviews, CI pipelines, and detailed documentation.

MULTTV

Software developer

September 2021 - February 2022 (6 months)

São Paulo, Brasil

- Spearheaded the development of the MultTV Plus multi-platform app using Flutter SDK, resulting in a successful launch across iOS, Android, and Set-Top Box platforms, with over 1,000 downloads on the Google Play Store as of October 2024.
- Managed the full development lifecycle, from planning and testing to deployment on the App Store and Google Play Store, ensuring a high-quality release and a seamless user experience across platforms. Applied Test-Driven Development (TDD) to ensure code reliability and maintainability throughout the project.
- Automated CI/CD workflows using GitHub Actions, significantly improving development efficiency and reducing manual steps in the deployment process.
- Collaborated closely with the CEO and directly translated high-level requirements into tailored development plans. Enabled white-label customization of the app for regional ISPs, expanding the client base and reinforcing strategic partnerships.
- Independently executed project roadmaps and maintained accountability for delivery milestones, while upholding exceptional quality standards. Integrated over 70 live TV channels and 3,000+ on-demand titles to boost user engagement.

wepulse

Frontend Developer

October 2019 - March 2020 (6 months)

São Paulo, Brasil

- Developed and maintained a responsive health services web platform using React, Redux, Styled Components, and SASS, delivering scalable front-end architecture that supported new features and optimized performance.

- Built reusable UI components with CSS Grid, Flexbox, and responsive design principles, ensuring seamless rendering across different screen sizes and devices.
- Ensured seamless integration with RESTful APIs, collaborating closely with backend developers to define interface contracts and improve data flow across the platform.
- Followed Agile methodologies such as Scrum and Kanban to coordinate sprint planning, daily stand-ups, and retrospectives, while implementing performance optimization techniques like code-splitting and lazy loading to reduce load times and improve responsiveness.
- Applied Gitflow for version control and collaborated through pull requests and code reviews, enhancing team productivity and maintaining clean codebases.
- Identified and fixed technical issues, including layout bugs, style inconsistencies, and component behavior anomalies, improving platform stability and reducing user complaints.
- Contributed to UI/UX improvements by working alongside designers to ensure pixel-perfect implementations and intuitive user interactions.

Análise Editorial

Frontend Developer

March 2019 - September 2019 (7 months)

São Paulo, Brasil

- Designed and developed the company's website from the ground up using React JS, Redux, and CSS Modules, creating a visually cohesive and high-performance platform that enhanced user engagement.
- Engineered advanced, fluid animations using React Spring to elevate the user experience, including a custom mobile menu and a tailored carousel component that addressed specific UX needs and outperformed pre-existing solutions.
- Collaborated closely with the backend team to seamlessly integrate the website with a concurrently developed CRM via REST APIs, ensuring efficient data exchange and improved system functionality.

- Promoted brand consistency by standardizing fonts, formatting, images, and layouts, achieving a professional and cohesive visual theme across the platform.

- Implemented a responsive, mobile-first design approach, ensuring optimal viewing across various devices and screen sizes, which contributed to a significant increase in mobile user engagement.

Education

Centro Universitário FAM

Artificial Intelligence, Information Technology · (August 2026 - August 2028)

Faculdade de Tecnologia de São Paulo - FATEC-SP

Technologist, Systems Analysis and Development
